🚀 ZuluTech Send Money

> *“Transactions don’t just move money — they move stories.” — Leonard Phokane*

ZuluTech Send Money is a culturally grounded fintech prototype designed to make peer-to-peer transactions intuitive, ethical, and visually resonant. Rooted in Limpopo’s values and built using Flutter & Firebase, this project reimagines how financial tools can serve both functionality and heritage.

🌍 Vision

- **Fintech with Soul**
  Designed for seamless money movement powered by trust, culture, and clarity.

- **Community-Driven**
  Built from lived experiences, user testing, and ethical audit principles.

- **Afro-Futurist UI**
  Every shimmer, ripple, and button curvature reflects intentionality and cultural storytelling.

🛠️ Tech Stack

Tool	Purpose
Flutter	Core app framework
Firebase	Real-time backend
GitHub	Repository & CI/CD
Canva	Visual storytelling + pitch deck

🔑 Core Features

- **OTP Secure Login** – No email or data mining, just trusted access
- **SendButton Widget** – Clean CTA with intuitive transaction initiation
- **AnimatedSuccess** – Joyful and ethical UX completion screen
- **DropdownMenus** – Smart handling of payment method + purpose
- **ShimmerEffect** – Afro-futurist loading animation with ethical cues
- **Transaction History** – View and tag past transactions with embedded meaning
- **Currency Selection** – Support for ZAR and future African integrations

---

💸 Pricing Model

This app is currently in its **Freemium showcase phase** — available for testing, feedback, and legacy-building.

Tier	Description
Freemium	Pre-release access, no commercial use

> 🧪 Ideal for usability feedback and ethical iteration
> 📌 Future tiers exist conceptually (Premium, Business Pro) but are not yet deployed.

📍 Showcase & Demo Access

- 🔗 [ZuluTech Padlet Archive](https://padlet.com/plp9/my-distinguished-padlet-obiq9mj5yr6u1mxo)
- 🗒️ Canva Pitch: *“The Spark Behind Send Money”*
- 📦 GitHub Repo: github.com/leonardphokane/send-money *(if published)*

🔗 QR Code Generator
Create custom QR codes to share your Padlet, portfolio, or app showcase with a single scan.

🔧 [Visit QR-Code-Generator.com](https://www.qr-code-generator.com/)

📌 Perfect for:
- Linking to your ZuluTech Padlet
- Sharing GitHub repos via printed docs
- Embedding Canva portfolios for judges and collaborators

📜 License & Credits

This prototype is shared under a **Legacy-Based Fair Tech License** — free to view, remix, and reference for ethical innovation purposes. Inspired by PLPCommunity, ZuluHealth, and the future of fintech storytelling.

PROJECT PRESENTATION

LEONARD PHOKANE

The Spark Behind Send Money

In a world where digital finance often ignores cultural context, this project began with one key question: What if money could move with meaning? ‘Send Money’ was born not just to enable transactions, but to reflect trust, legacy, and community priorities — rooted in the realities of Limpopo and powered by code.

Explore the Code

OUR VISION: FINTECH WITH SOUL

To make money movement as meaningful as it is seamless.

Explore the Code

Built with scalable tech: Flutter, Firebase & ethical audits.

Designed for frictionless transactions and joyful user flows.

Rooted in community - crafted by values, not just features.

Enhanced loading animations with ethical UX vibes

TECH STACK & BUILD STRATEGY

This app is powered by a modular tech stack designed for agility, precision, and scalability. Every screen, animation, and widget was shaped through iterative builds and fairness-centered logic — combining Flutter’s versatility with Firebase’s real-time efficiency.

Explore Build History

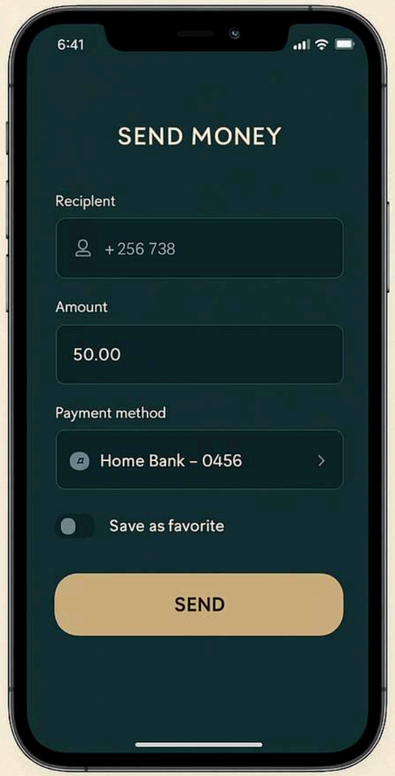
Creation Process: From Vision to Flow

Concept & Spark

The Send Money app was sparked by one question: What if fintech felt like home? The creative impulse came from stories of trust and legacy in Limpopo.

Design Language

Built with Afro-futurist aesthetics and user-first logic. Every curve, shimmer, and animation reflects clarity and care.



Workflow & Tech

Flutter widgets were engineered in cycles — SendButton, Dropdowns, AnimatedSuccess — through collaborative iterations and GitHub branching.

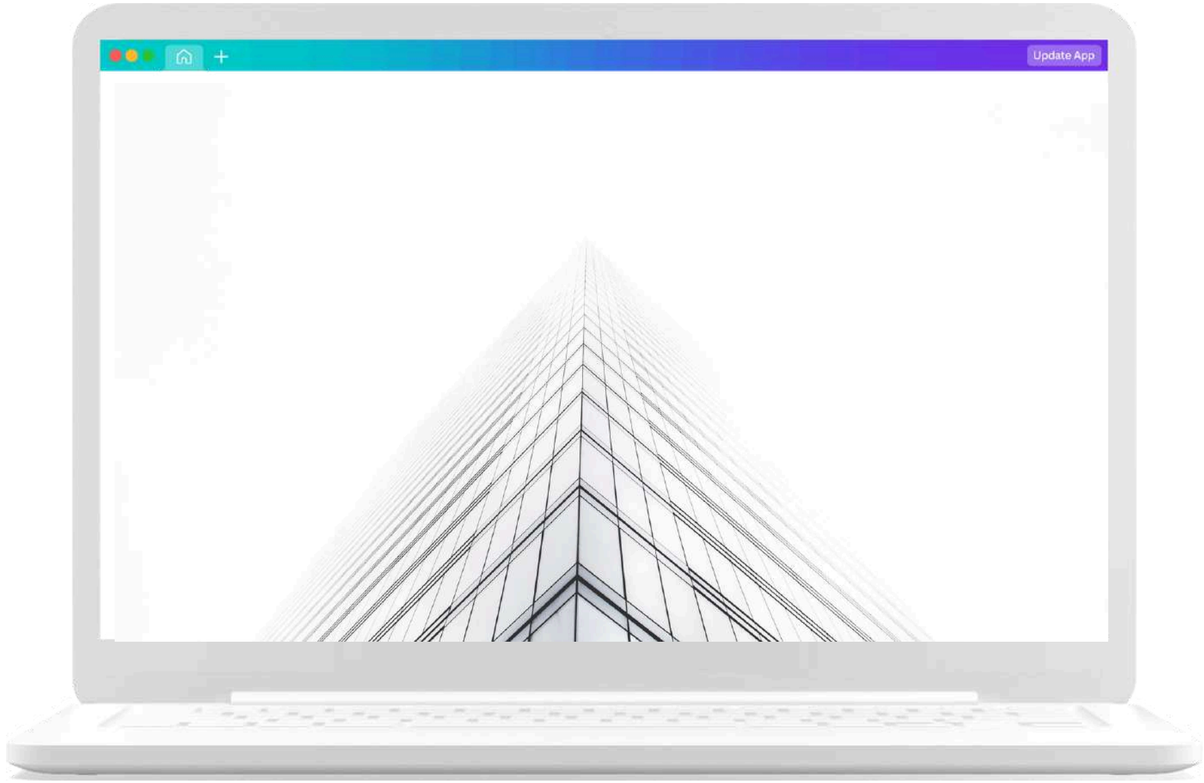
Afro-futurist Functionality

Every visual element — from shimmer transitions to button curvature — is designed to reflect trust, rhythm, and intentionality.

UI MOCKUPS: DESIGN IN MOTION

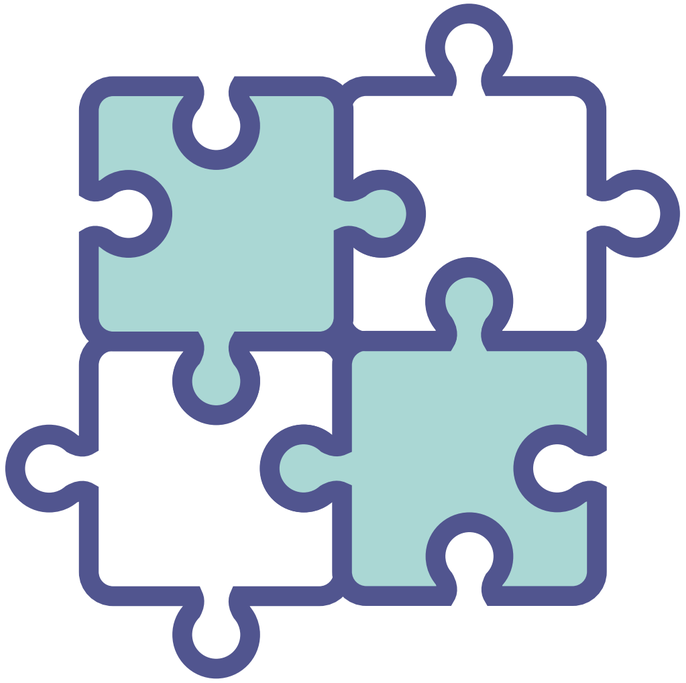
Exploring creativity

From wireframe to rhythm — every screen reflects culture, clarity, and care.



S.W.O.T

SWOT Analysis: Building with Purpose



S

Strengths

Culturally intuitive UX, reusable Flutter widgets, ethical design principles, community-driven testing.

W

Weaknesses

Limited offline support, early-stage scalability, dependency on Firebase

T

Threats

Big tech competition, privacy concerns in third-party integrations, market saturation.

O

Opportunities

Fintech expansion across Africa, storytelling through UI, stragegic PLPCommunity collaborations.
